

## NEW PRODUCT RELEASE

### Computer Aided Dispatch Software Accommodates Multiple Mobile Platforms Including PDAs and MDTs

Public safety communications systems today utilize multiple wireless mobile platforms including mobile radios, portable radios, MDTs, PDAs and pagers. To be effective, Computer Aided Dispatch (CAD) systems and software need to accommodate multiple platforms and the changing needs of public safety. RadioMobile introduces IQ CAD 911, a computer aided dispatch application set complementing its networking and mobile management suite of products. IQ CAD 911 is built with state of the art design and database tools

and performs all the basic CAD functions for call taking, fleet resource management and report generation. It also features multi-call detection, E911 interface, dispatch via map module, as well as SMS messaging to PDAs, pagers or MDTs.

RadioMobile is a provider of affordable end-to-end mobile wireless network solutions for public safety, emergency medical, and transportation customers. RadioMobile is a division of RF Industries (NASDAQ RFIL), a leading supplier of telecommunications and medical cable products through its company divisions. For additional information call 800-233-1728 or 858-549-6340.
