

**NEW PRODUCT RELEASE**  
**RF Neulink announces NL5000 Wireless Modem -**  
**Fills economy/performance niche**

San Diego, CA – RF Neulink, a leading supplier of wireless data transceivers, has broadened its portfolio of wireless data products to include the NL5000. The NL5000 Transceiver Series is a price/ performance leader in licensed conventional radios in both the VHF and UHF frequency range. They provide increased throughput, and longer range for multiple address systems. Transparent and direct asynchronous communication offers real-time communication. No extra software or programming is needed to implement communications using standard asynchronous protocols.

The NL5000 Transceiver Series is field configurable as a master station or remote radio. They can operate as a half-duplex or simplex radios. The simplex mode facilitates peer-to-peer radio communications while using a carrier sense (CSMA) channel collision avoidance technique.

For over two decades RF Neulink has been providing wireless data networking solutions with applications in SCADA, telemetry, telecommunications, and water management. The NL5000 is positioned to deliver state of the art wireless data solutions at compelling price points.
