

Division of RF Industries

## NEW PRODUCT RELEASE

### N Female Connector Designed for Popular Plenum Cable

Where wireless applications require an easily routed, low loss RF cable for in-building systems, Times Microwave's LMR®-400-LLPL has become a popular choice. This cable is an indoor highly fire retarded cable intended specifically for runs within return air handling plenums (e.g. dropped ceilings, raised floors).

To meet the connection needs of this plenum cable RF Connectors has designed the **RFN-1028-I2 N** female connector with crimp attachment to offer the perfect fit and performance. The connector body is made of machined brass with nickel plating. All dielectrics are made of PTFE with gold plated contacts.

RF Connectors is a division of RF Industries (NASDAQ RFIL), a leading supplier of connecting solutions provided through its operating divisions: RF Connectors, RF Cable Assembly, Aviel Electronics, RF Neulink, RadioMobile, OddCables and RF Precision Products.
